

Samira Gevara

Applied AI & Robotics Student

Healthcare AI

Applying machine learning to real-world clinical challenges

Computer Vision

Building perception systems from raw image data

NLP Systems

Developing language models for healthcare & beyond

Learning Journey

From foundational model training to production-ready deployments — a deliberate progression through the full AI development stack.

1

Computer Vision

Image classification, CNNs, and feature extraction using **PyTorch** and **TensorFlow**

2

Healthcare AI

Domain-specific model development for clinical decision support and diagnostic assistance

3

NLP Systems

Symptom analysis, text classification, and explainable AI with transformer-based approaches

4

Deployment

End-to-end app delivery via **Streamlit**, version-controlled through **GitHub**

The defining shift: moving from **learning models** to **building applications** — bridging research and real-world impact.

Featured Projects

Three end-to-end AI systems spanning computer vision, clinical decision support, and healthcare NLP — each designed with real-world deployment and usability in mind.

G.O.A.T Vision

CNN-based soccer play classifier built with **PyTorch** and deployed via **Streamlit**. Analyzes match footage to identify and categorize plays in real time.

PYTORCH

CNN

STREAMLIT

Spartacus

AI-assisted dental insurance decision support system that simplifies complex coverage logic and helps patients navigate treatment planning intelligently.

TENSORFLOW

NLP

HEALTHCARE AI

Endometriosis AI

Healthcare NLP system exploring symptom pattern analysis and explainable AI to surface insights for underdiagnosed conditions — a meaningful step toward equitable care.

NLP

Skills & Competencies

Technical Stack

AI Area	Tools & Frameworks
Computer Vision	PyTorch, OpenCV
NLP	TensorFlow, Transformers
Workflow Automation	Streamlit, Python
Machine Learning	Scikit-learn, GitHub

Soft Skills

→ Problem Solving

Breaking ambiguous challenges into actionable solutions

→ Adaptability

Thriving across fast-changing research and build environments

→ Communication

Translating technical work for cross-functional audiences

→ Analytical Thinking

Data-driven decision-making at every stage

Reflection & Next Steps

Building toward a future where AI is not just powerful — but purposeful, explainable, and accessible in the settings that matter most.

Current Focus

- Deployable AI systems with real-world utility
- Healthcare AI applications and clinical NLP
- Workflow automation for high-impact domains
- Computer vision pipelines end-to-end

Future Goals

- Expand real-world AI applications at scale
- Deepen healthcare-focused AI tooling
- Pursue opportunities in AI and cybersecurity
- Contribute to explainable, ethical AI systems
